# T3.1.2 Steps and description of the case

#### CASE- WARD ROUND SURGICAL HOSPITAL UNIT

### Developed by:

Bodil Bø - Associate professor, Faculty of Health Sciences UiS Ingrid Tjoflåt – Professor, Faculty of Health Sciences UiS Kåre Spanne – Media Engineer, NETTOP-UiS Mari Linn Larsen – Video Producer, NETTOP-UiS

#### **BRIEF:**

### What's the goal of this learning tool?

Ensure knowledge and confidence to practice a hospital ward round in a surgical hospital unit:

- Knowledge about interprofessional collaboration during the ward round.
- Skills: Carry out a ward round in a surgical unit
- *General competence:* Reflects on the interprofessional communication and collaboration in a ward round.

#### Who is the user of this tool??

Nurse student in in the  $2^{nd}$  and  $3^{rd}$  year of the Bachelor program in nursing and medical student in  $4^{th}$  year.

#### Why are we making the video in 360 format and not 2D video?

A comprehensive and complete overview of a complex surgical ward round in a hospital, where several factors interact together (patients, doctor, nurse and different things happening during the visit)

### **ROOM DESCRIPTION: (What we see in the room)**

360 degrees still picture from a 4-bed patient room in a surgical unit. 4 patients are laying in bed.

Patient 1 - Female 70 years

Patient 2 - Female 20 years

Patient 3 - Female 45 years

Patient 4 - Female 70 years

### **OBSERVATION VIEW: (where to place the 360 camera)**

In the middle of the room.

## AUDIO DESCRIPTON: (what we hear in the room):

No audio

### **HOTSPOTS WITH INFORMATION/ LEARNING ELEMENTS:**

Hotspot 1 I-icon Placed above patient 1 – to the left Photo Patient 1 - Female 70 years  Audio Female 70 years, operated for explorative laparotomy due to suspicion of ileus. first post –operative day. Wating for findings from the surgery. She is complaining about nausea and abdominal pain. She received pain medication one hour ago. The surgery showed that the patient has cancer with metastasis to liver, gall bladder and to the kidneys.  Hotspot 2 Play - icon Placed under the i-icon Video (2D) where the doctor, nurse and patient communicate together during the ward round  Hotspot 3 Q-icon Placed under the Play-icon Text Reflect on how the physician and the nurse communicated interprofessional to the patient during the ward round  Reflect on how you as a nurse or physician will follow up the patient needs for treatment nürsing care.  Hotspot 4 I - icon Photo Patient 2 - Female 20 years  Audio Female 20 years, operated for acute appendices during the night, uncomplicated postoperative period. The plan is that the patient will be discharged. The female is a student and is coming from the north of Norway, she has no family in Stavanger.  Hotspot 5 Q-icon  Text Nurse: What are the nurse responsibilities related to the discharge of this patient?
